

At Valeriano Orthodontics, we have a Philosophy we would like to share with you. We believe whole heartedly in providing our wonderful patients, with the best care possible.

- We treat the face first. While traditional orthodontic treatment has focused primarily on "a good bite" we believe that our primary objective is to create a beautiful smile and enhance facial esthetics to improve the bite.
- A beautiful smile is more than just straight teeth. We always evaluate and treat the smile on a "micro level." We reshape teeth and change their proportions, evaluate smile lines and recontour gingival with a laser.
- We create beautiful faces for a lifetime. Orthodontic treatment affects how the face looks today and how it will look in the future. Our goal is to do what is best for the "aging face."
- We can achieve great results in most patients without extraction of permanent teeth or jaw surgery. Extractions are done when it is an enhancement to the facial features. We never remove teeth just to "fix the bite".
- We use low force and low friction braces with high tech wires to move teeth as quickly and with as little pain as possible.
- Since it is a vital component to great orthodontic treatment, we strive to provide our patients with excellent communication. We believe that our "Patient Manager System" is the best way to continually improve and enhance communication.
- We believe in positive motivation and are always looking for new ways to keep our patients involved.
- We combine the latest technology with excellent clinical skills and expertise.
- We believe in lifetime of retention and we will do everything possible to make that an easily achievable goal for our patients.
- We are truly grateful for all of our wonderful patients and parents that have given us the opportunity to serve them. We hope that orthodontic treatment will do more than create beautiful smiles- we believe that we can positively change lives!
